HIV notifications immigrants infected before entering Norway 1984-2008 by year of diagnosis and place of birth
Coinfections hiv / tuberculosis?

We don`t know, but probably a minor problem so far

HIV surveillance : Anonymous
Tuberculosis surveillance: Full patient identification
No linking possible
HIV situation in Norway

- Total 4400 HIV notifications as of 1. January 2010
- Considerable increase in no. of cases infected in Norway during the last years due to an increase among men who have sex with men.
- Increase in annual numbers of immigrants from Africa diagnosed with HIV after arrival in Norway
- Number of newly infected drug users remains low and stable
- Approx. 4000 people living with HIV (PLWH) in Norway. Of these:
  - Ca. 40 % of PLWH is heterosexuals, the great majority of immigrant background
  - Ca. 40% of PLWH is men who have sex with men
  - Ca. 10% of PLWH is infected in other ways, primarily by injecting drug use.
- Approx. 30 - 40 children are living with HIV
Some HIV activities Norway 1.3. 2010

- Follow-up of the Strategy plan involving 6 Ministries published June 2009
- Increase support and follow-up of people living with HIV
- More testing among men who have sex with men (checkpoint?)
- EPI-North cooperation continues for another 3 years (2009-2012) financed by ECDC
- Behavioral surveillance and prevalence studies for risk groups (homosexual males and drug users)
