HIV situation Norway 2009
Reported no. of HIV-infection per 100 000 inhabitants in the EPI-NORTH cooperation area, 2008

Source: http://www.epinorth.org/
HIV situation in Norway

- Total 4200 HIV notifications as of 1. Sept 2009
- Considerable increase in no. of cases infected in Norway during the last years due to an increase among men who have sex with men. This increase continues in 2009
- Increase in annual numbers of immigrants from Africa diagnosed with HIV after arrival in Norway
- Number of newly infected drug users remains low and stable
- Approx. 4000 people living with HIV (PLWH) in Norway. Of these:
  - Ca. 40 % of PLWH is heterosexuals, the great majority of immigrant background
  - Ca. 40% of PLWH is men who have sex with men
  - Ca. 10% of PLWH is infected in other ways, primarily by injecting drug use.
- Approx. 30 - 40 children are living with HIV
HIV-infections Norway reported 1984-2008 by place of residence at time of infection.
