

How PHC services are coping with the ongoing pandemic. Preliminary lessons learned - Sweden

Ev. underrubrik
Irène Nilsson Carlsson

2021-05-28

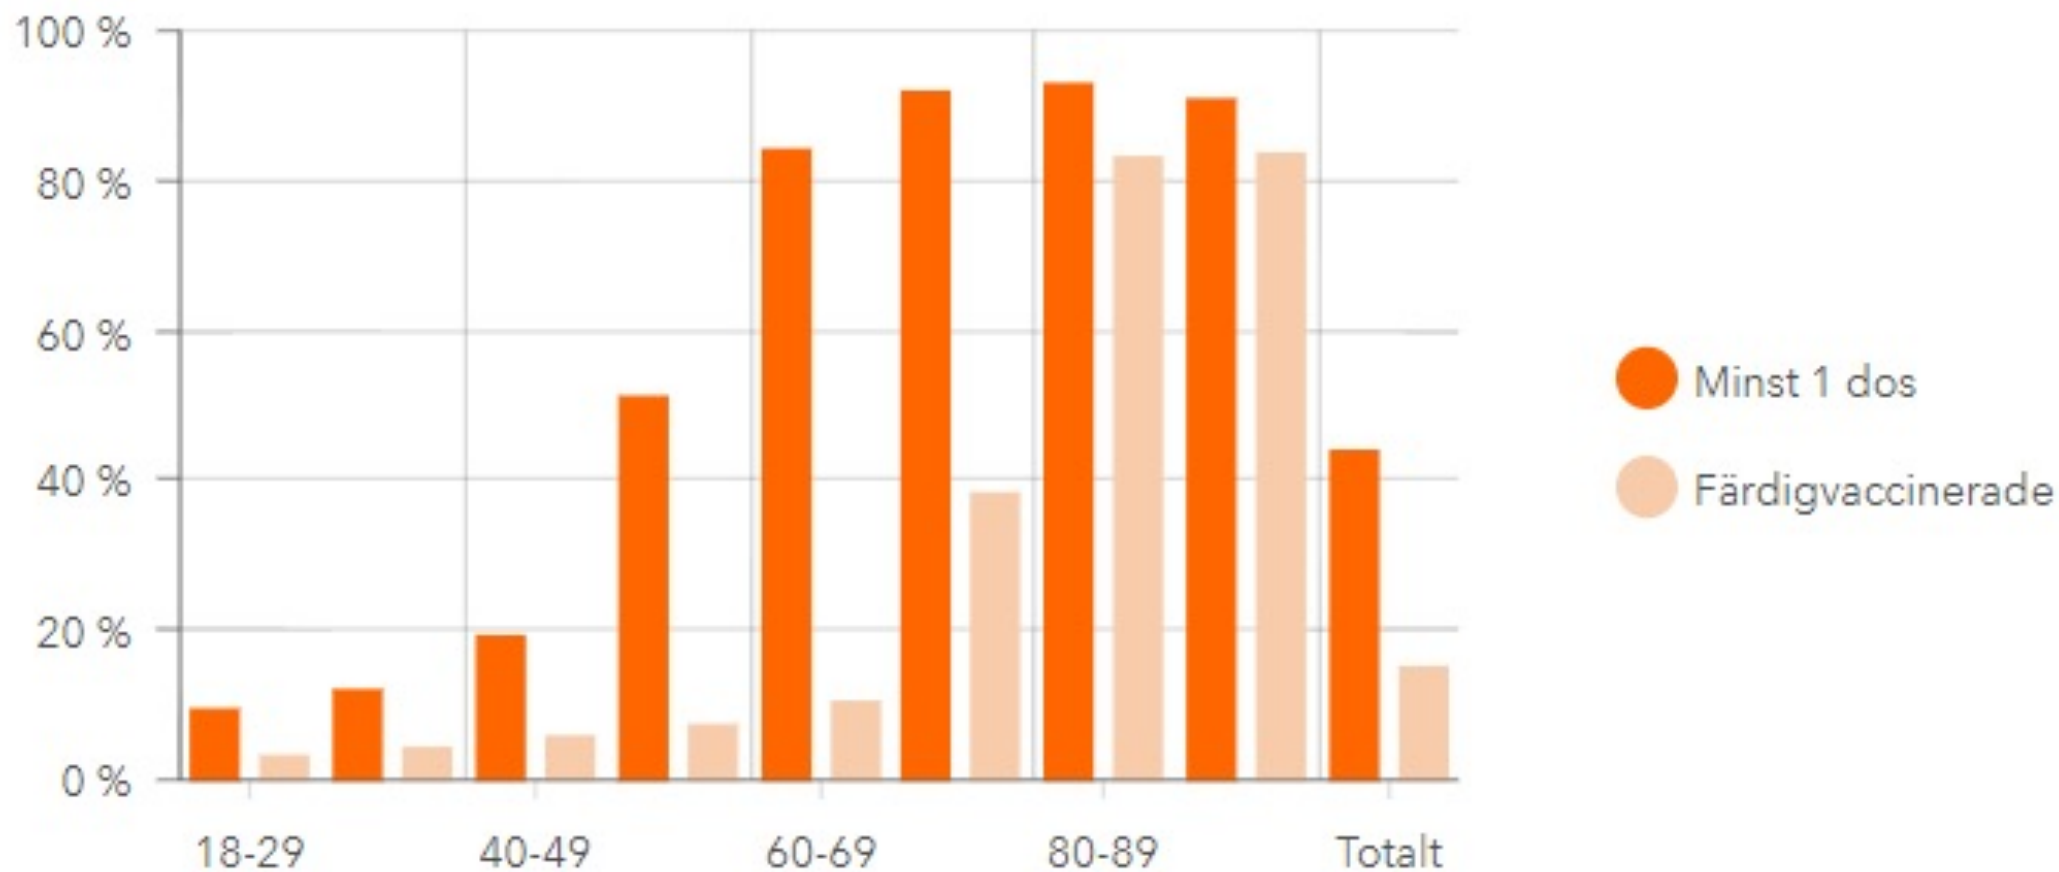

Example of tasks for primary health care in the covid-19 pandemic

- Health care services in special housing for elderly and home care
- Vaccination
- Health care for people with post covid symptoms not in need for specialized health care services
- Health care for people with delayed surgery, and side effects caused by delays
- Support people who suffer from long time isolation and inactivity.

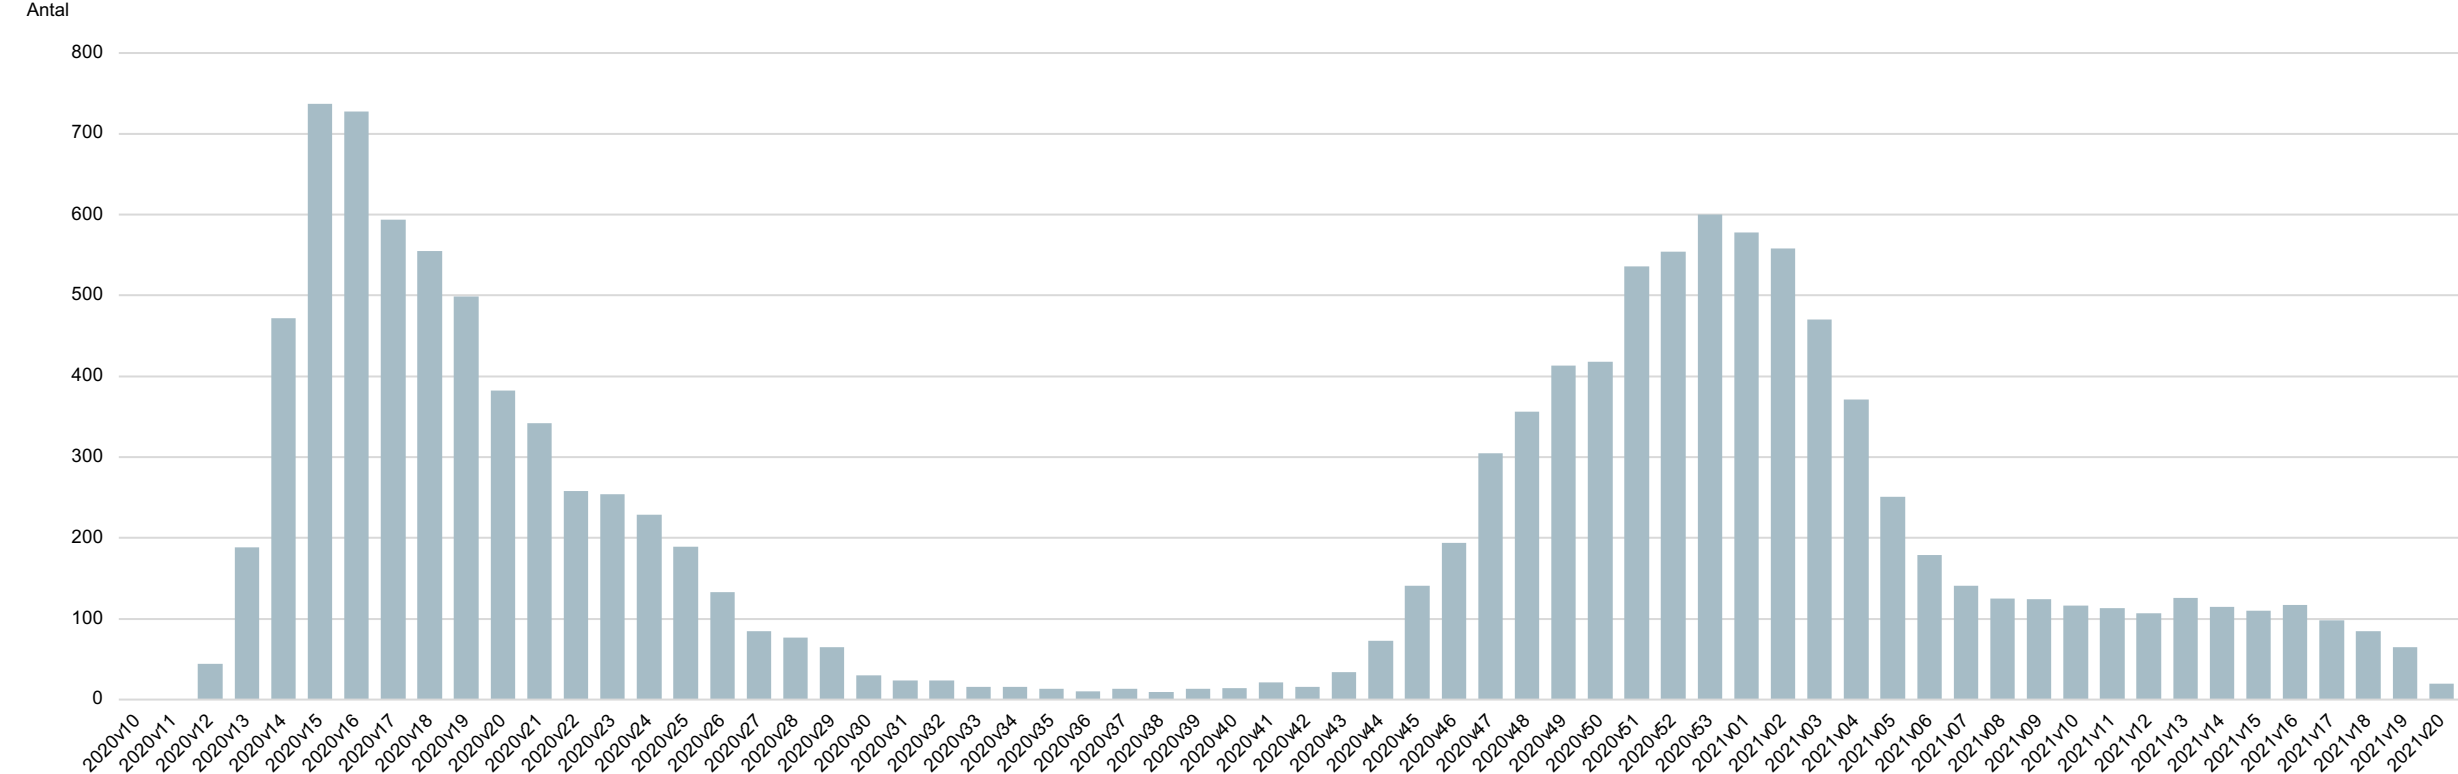

Vaccinerade per åldersgrupp. Andel av befolkningen

Need to continue improve the health care system, for eg.

- Improve accessibility, patient participation and continuity in primary health care. More patients should have a special appointed general practitioner
- Put more emphasis on health promotion and disease prevention
- Strengthen medical services in special housing for elderly
- Improve collaboration between municipalities and regions
- Increase emergency preparedness
